

# Tank Reading Route Analysis Report

Last Modified on 02/03/2026 4:55 pm EST

Navigate to *Main Menu / Management Reports / Management Reports / 15 Tank Rdg Route Analysis*.

This is to be processed quarterly.

This report is designed to display the route, customer type, and delivery type associated to tanks delivered for a given time period. The starting percentage of the delivery is indicated to show the tank starting percent at the start of delivery to easily detect a tank run-out event.

When processing the report, specify the delivery type, or set the delivery type as 0 (zero) for All types.

When reviewing the report, note the Delivery Types associated to the tanks. Was it a true runout (k-factor tracked tank), or a Will Call customer type that did not call in with an accurate tank % or waited to call until they actually ran out? If it is a Julian delivery type, analyze the schedule associated to the tank.

☐ 1 Meter Consumption

☐ 2 Driver Summary

☐ 3 Department Summary

☐ 4 Delivery Efficiency/Tank

☐ 5 Delivery Efficiency/Cust.

☐ 6 Delivery Efficiency/Driver
