Map Settings

1. Select the **Settings** icon located on the Map toolbar.
2. Choose each tab to customize.

Filters

Enable filters to specify which tanks display when scheduling tanks for delivery.

A screenshot of the 'Settings' dialog box with the 'Filters' tab selected. The dialog box contains several checkboxes and input fields for filtering tank objects. The text inside reads: 'The following settings determine the visibility of tank objects. Tanks meeting only the minimum gallons condition display as an outline.' Below this, there are three checked options: 'Show auto-fill tanks which are between 0 % and 100 % full.', 'Show julian deliveries due within the next 5 days.', and 'Mark julians critical if they are at least 5 days past due.' These are grouped under an 'AND' separator. Below the 'AND' separator are three unchecked options: 'Show tanks with zero gallons to deliver.', 'Show call-in tanks with no active entry.', and 'Show tanks that are on hold.' These are grouped under an 'OR' separator. At the bottom, there is a text field 'Show tanks with at least 100 estimated gallons available to fill.' and 'OK' and 'Cancel' buttons.

- **Show auto-fill tanks which are between** – Display auto-fill tanks with an estimated percent left within the chosen range.
- **Show Julian deliveries due within the next** – Display Julian deliveries that have a next scheduled date within the amount of days from today that is entered.
- **Mark julians critical if they are at least** – This will modify the symbol of Julian deliveries to display with a bold border to indicate past due.
- **Show tanks with zero gallons to deliver** – Display tanks where the estimated gallons to deliver is 0.00.
- **Show call-in tanks with no active entry** – Display Call In Delivery Type tanks that do not currently have an active Call In assigned.
- **Show tanks that are on hold** – Display tanks that are actively on hold.

GPS
